

Automatic Face Mask Making Machine

Automatic face mask making machine is upgraded model for fully auto model for making 3 layer face mask.

As we know that the mask is a combination of a mask body and an ear strap. A traditional face mask machine is a body machine to produce a mask body, and then the ear strap is welded by an inner/outer ear strap welding machine. The output of body machine is about 2-3 times that of the ear strap welding machine, in order to achieve the perfect combination of the production of the body machine and the automatic spot ear strap machine, we need a body machine to combine two inner and outer ear strap machines to achieve the maximum efficiency of the production line. Our company's latest one-to-two mask production line realizes the automatic production of the machine, producing 150 pieces per minute.

Our company has always been committed to the development and production of ultrasonic mask machines. By constantly optimizing the performance of the machines, we can create better mask production equipment for customers. This time, our company has newly upgraded its mask machine connection device to

stably speed up the collection and delivery of masks and improve the productivity and efficiency of one-to-two mask production line, which helps companies to create greater profits. Because of our professionalism and intentions, it will save you more peace of mind.

Technical data:

Ultrasonic frequency: 20KHz

Machine size: 6000×3000×1600MM

Voltage: 220V-50/60Hz

Pressure: 5-6KG/CM2

Capacity: 120-150PCS/MIN

Power: 12KW
